

HYDAC TECHNOLOGY LTD

Hydac Technology offers a comprehensive range of control products in hydraulic, electronic and solenoid technology plus fluid and condition monitoring sensors.

Challenges:

- Design and manufacture of dual and rf3-5 filter frames to dnv 2.7-1 designed for a water filtration system, riverside in Basra, Iraq.
- Turnkey project from first point of contact through to design and delivery.

Delivery outputs:

- The Woollard & Henry team kept in close contact throughout the project with regular communication, project updates and arranged site visits to our premises by hydac technology personnel.

CUSTOMER IMPACT

“Hydac Technology have developed an excellent working relationship with Woollard & Henry, built up over several projects in recent years; they have always acted in a most professional manner and been committed to helping to achieve our project objectives and timescales.

The most recent project was on a key account application to supply both single and duplex filter skid assemblies for the pre-conditioning of river water for a down hole pumping station; this contract was delivered on schedule, to specification and achieved customer satisfaction as with all our previous project work with Woollard & Henry.

Our close working relationship has proved to be most helpful, especially in cases where short notice specification changes have been required to be made, Woollard & Henry proving to be very adaptable. We are very happy with the work Woollard & Henry produce for us and we look forward to working with them on future projects.”
