# DANDY ROLL SYSTEMS

With an unparalleled level of precision and accuracy, Woollard & Henry's Dandy Roll Systems are in operation all over the world producing paper grades for applications such as printing and writings, high security watermarking, cigarette tissue and décor printing to name but a few. These systems are designed to complement our industry-leading Dandy Rolls, building on the technical expertise and exceptional quality our customers have come to expect in the delivery of bespoke solutions to support their commercial objectives.

## SPECIFICATION

Manufactured in EN1.4404 Stainless Steel, our Dandy Systems are specifically designed as open machines to:

- Reduce pulp build-up
- Limit the potential for mechanical breakdown
- Reduce the possibility of print defects such as light spots and holes

## FEATURES & BENEFITS

### **Extreme accuracy:**

The combination of double geodetically-wound wires and top bars set in the notched helical delivers an extremely accurate finished Dandy Rolls

### **No air bells:**

The integrated cleaning system complete with water and steam shower to disperse air bells and keep the Dandy clean

### **Reduction of white spots, marking or paper bursts:**

Upstream and downstream save-all trays prevent droplets of water falling onto the paper

### **Enhanced image quality:**

For watermarked products the under Dandy vacuum box removes water at point of contact ensuring superior image reproduction and further de-watering of the sheet

### **Range:**

Systems to suit from <200mm to 2000mm diameters
