

OUR PRODUCTS**ACCUSHOWER**

The Woollard & Henry Accushower is a tried and tested waterspray system employed in the papermaking process to control moisture and remoisturization of the sheet. Using the latest fluid technology based on our experience and detailed FEM calculations, the AccuShower atomizes the water into extremely small particles forming a fine mist which via offset nozzles ensure perfect water application. The water mist is absorbed by the paper sheet and used to rewet the completed paper in each direction.

FEATURES & BENEFITS

Moisture control:

Increase in moisture and improved moisture control/profile

Remoisturization:

Improves controllable range by up to 3%

Profile control:

Peak to peak maximum 0.25% moisture difference

Varied positioning:

Can be installed within dryer section, cooling cylinder or in front of calendar

Water containment:

No water droplets or mist outside the spray system

Scalable:

Showers can be manufactured up to 9500mm

Nozzle spacing:

100mm/double row (off-set) enables 50mm coverage

Try before you buy:

We are so confident of the production and commercial benefits of our AccuShower range that we now offer trial units to assess accurate quality improvement and ROI figures
